

PARTICULATE FILTER

WITH OFF-BOARD REGENERATION

Based on a wall flow silicon carbide filter (SiC), which reduces particulate matter by > 97%.

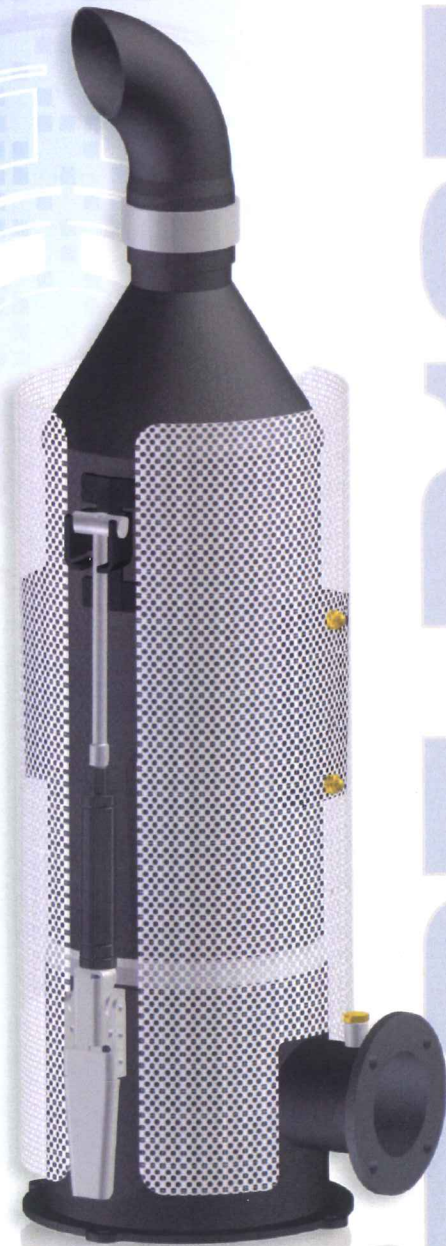

Ideal for vehicles with low exhaust temperatures such as forklifts, yard machinery, earth moving equipment and railroad machinery.

Guarantees a nonstop work cycle of approximately 20 hours.

Quick and easy to replace filter module, thanks to its special quick-release couplings.

The filter is regenerated in an electric oven supplied with the system.

The **BPF R187** filter works without additive and can be fitted on all types of engines.
